1. Enhancements

The only changes to the installer are to the French and Spanish language packs. The 6.5.0 installer didn't include the updated language packs which means that the labels and texts in the Publisher and Designer for all the new features appear in English rather than in French/Spanish.

2. Who should upgrade to 6.5.1

The source code of the software has not changed, i.e. there are no bug fixes or new features included in this release. Therefore, if you are not running InstantAtlas in either French or Spanish, there is no need for you to upgrade to version 6.5.1.

3. Versioning

The new version number will only appear when you check the software through the Windows Control Panel. The Desktop Tools (Publisher, Designer and Style Editor) as well as the InstantAtlas Templates will still show version 6.5.0 since the source code itself has not changed.

4. InstantAtlas Support

You can find IA support resources at www.instantatlas.com/support.xhtml. InstantAtlas customers can login to their My InstantAtlas account and download a wide range of support resources and access a searchable knowledgebase. If these resources do not provide a solution, please contact your support provider.
