

NEW LIS RESOURCE PACK

We have recently published a Resource Pack of free LIS resources compiled over 2008 in collaboration with our customers.

This includes links to:

- Online webinars
- Case studies
- Relevant reports
- Useful web links

The Resource Pack is available at

www.instantatlas.com/lis

InstantAtlas Monthly e-bulletin

GeoWise publishes a monthly e-bulletin with all our latest news plus featured examples of new customer applications.

The e-bulletin is the best way to keep in touch with our LIS activities, including published resources and planned events.

InstantAtlas Server is the UK market leading off-the-shelf [Local Information System](#). It is a mature, operationally proven solution now being used by over 30 local partnerships and local authorities. InstantAtlas Server v.6 is due for release in Spring 2009 and will set a new standard for LIS solutions with a range of exciting enhancements.

InstantAtlas Server builds on our innovative InstantAtlas Desktop software. This is being used by more than 250 organisations worldwide to visualise, explore and communicate their local statistics and performance indicators.

InstantAtlas Server delivers tangible benefits to organisations and partnerships seeking a common platform to share information effectively and securely. It also provides an ideal window onto local information for external users - citizens, community groups, students, voluntary sector and businesses - empowering them to make better decisions with valued information.

The core of the product is based around a central datastore designed specifically for statistical and performance indicators linked to geographic areas and time periods. Data can be pulled dynamically from other business systems, for example corporate GIS datastores, while services can also be set up to allow data

to be pushed into other systems, for example Performance Management Systems. A rich set of web-based administration tools provide full flexibility to devolve management tasks to a set of trusted partners or, alternatively, these tasks can be centralised within a support team.

InstantAtlas Server Modules

The product is modular so you only ever need to buy the functionality required for your end-users. This also means you can buy the product in stages that may better suit your plans and budgets. You can create a tightly focused area profiling tool or a comprehensive observatory style reporting environment where users can create a range of outputs including data tables, charts, maps, dashboards, profile reports, documents and metadata depending on the modules used.

Non-experts can rapidly access carefully designed reports built by expert administrators. Analysts have a rich set of tools to find their information resources of interest, produce and save their own custom reports, explore datasets in more detail and download selections for further use off-line.

Local Information Systems, data observatory, neighbourhood information system, JSNA guidance, Comprehensive Area Agreements, Local Area Authorities, Neighbourhood Renewal, Community Empowerment

InstantAtlas Server Benefits

Meet the needs and expectations of a wide range of customers

- InstantAtlas Server provides your end-users with consistent, reliable information in the form they need it. It makes information easily accessible thereby significantly reducing search times and minimising the risk of duplication.
- The product offers multiple ways to view information from one-click access to great looking profile reports to more sophisticated search, reporting and exploration tools.
- Behind-the-scenes administration tools give you complete flexibility over the design and content of your outputs to tailor them to analysts, policy officers, performance managers, front-line staff or citizens.

Minimise risk and maximise benefit from our existing user community

- The product now has a significant established customer base and a regular maintenance release schedule so you maximise your up-front investment from ongoing product enhancements.
- The product is supported by an active community of LIS managers and users across the UK - this community regularly exchanges advice and best practice.
- The InstantAtlas team offer a wide range of resources to assist LIS development from business case development to implementation planning.

Flexible purchasing and management model, rapid delivery

- InstantAtlas Server is a modular product - you only buy what you need. As your needs evolve then you can add other modules easily and quickly.
- It is available as software that you install on your own hardware or as an externally hosted solution to reduce your dependence on your internal IT department.
- Our dedicated Support Team are experienced in assisting customers, plan and implement effective LIS through documents, project plans and training.

Improve data management processes, devolve administration tasks

- InstantAtlas Server centralised data storage and administration tools support sound information management practices and minimise the risk of inconsistencies and effort duplication across an organisation or partnership.
- InstantAtlas Server provides an easy to use, web-based administration interface for loading and managing content, designing outputs and managing users - this enables you to share these tasks with other trusted data administrators, either in-house or externally.
